

The Heartsaver® First Aid CPR Training

The Heartsaver First Aid, Heartsaver CPR AED, and Heartsaver First Aid CPR AED courses are designed to prepare students to provide first aid, CPR, and automated external defibrillator (AED) use in a safe, timely, and effective manner. This video-based, instructor-led course is designed to prepare students in how to manage an emergency until advanced medical professionals arrive. Heartsaver courses are designed to be flexible and customizable with optional modules, and are intended for anyone with little or no medical training who needs a course completion card for job, regulatory (e.g., OSHA), or other requirements.

After successfully completing the **Heartsaver First Aid** course students should be able to:

- list the priorities, roles, and responsibilities of the first aid rescuer
- describe the key steps in first aid
- describe the assessment of and first aid actions for the following life-threatening conditions: heart attack, difficulty breathing, choking, severe bleeding, shock, and stroke
- use an epinephrine pen
- control bleeding
- recognize elements of common injuries and illnesses
- recognize the legal questions that apply to first aid rescuers.

After successfully completing the **Heartsaver CPR AED course** or the **Heartsaver First Aid CPR AED course**, students should be able to:

- describe how high-quality CPR improves survival
- explain the concepts of the Chain of Survival
- recognize when someone needs CPR
- perform high-quality CPR for an adult alone or as a team member during multi-rescuer CPR (child and infant CPR modules are optional)
- give effective breaths using mouth-to-mouth or a barrier device for all age groups
- demonstrate how to use an AED on an adult (child and infant AED modules are optional)
- describe when and how to help a choking adult or child (infant choking module is optional).

Upon successful completion of each course, including relevant skills testing, students receive a course completion card that is valid for two years.

Bloodborne Pathogens

The Heartsaver® Bloodborne Pathogens Course will teach employees how to protect themselves and others from being exposed to blood or blood-containing materials. This course is designed to meet OSHA requirements for bloodborne pathogens training when paired with site-specific instruction, and was designed specifically for workers with a reasonable chance of coming into contact with bloodborne pathogens. The course uses the PACT™ acronym (Protect, Act, Clean, Tell) and slogan, "Make a PACT, Know How to Act," to help students learn and easily recall bloodborne pathogens training.

After successfully completing this course, students will be able to:

- explain the importance of taking the Heartsaver Bloodborne Pathogens course
 - define bloodborne pathogens
 - describe the four main steps for staying safe when facing an occupational exposure
 - discuss how universal precautions, personal protective equipment, and hand washing can protect them from infection
 - recognize warning signs and labels for biohazards
 - recall how to safely remove gloves
 - discuss how to dispose of sharps and other blood-containing items
 - identify the types of spills and methods to clean them
 - discuss their exposure control plan

No skills test or skills demonstration is required at the end of this course. However, AHA provides an optional written exam for use if the employee requires an exam for completion.

Please note – to become OSHA compliant, there must be a company representative present that will discuss their site or location specific plan.

Fire Extinguisher Training

This course will include product specifications and handling of various types of fire extinguishers and using the pass method to extinguish.

Location: **Broner Glove & Safety Company**

1750 Harmon Road • Auburn Hills, MI 48326 • 1.800.521.1318
