

Broner helps you navigate OSHA's National Emphasis Program on Heat

SQUINCER HYDRATION SOLUTIONS

OSHA's NEP on OUTDOOR & INDOOR HEAT HAZARDS

The Occupational Safety and Health Administration (OSHA) has announced a National Emphasis Program (NEP) **focused on heat hazards, effective April 8, 2022**. Under the NEP, OSHA will be conducting proactive inspections for heat-related hazards—in both outdoor and indoor work environments. It thus behooves employers to ensure they have implemented appropriate safety measures to protect employees from such hazards before potentially coming under OSHA's heat lamp spotlight.

The NEP marks the most recent in a series of OSHA efforts to address heat hazards in the workplace. In the fall of 2021, OSHA announced a National Enforcement Initiative and published an Advanced Notice of Proposed Rulemaking, which is the first step on the long path to a federal heat standard.

Employers should understand what the NEP outlines as triggers to conduct heat-related inspections:

- When conducting other, non-heat-related investigations, OSHA will open a heat-related inspection into any hazardous heat conditions observed or reported.
- When the heat index is expected to be 80° or more (so-called "heat priority"), OSHA will inquire about heat-related hazard prevention programs during inspections.
- When the National Weather Service (NWS) has announced a heat warning or advisory for a local area, OSHA will use neutral, objective criteria to select employers for pre-planned inspections in high-risk industries in that area—including foundries, warehouses, farming, waste collection, and residential construction, among many others.
- When the Wage & Hour Division of the Department of Labor (WHD) is investigating reported inadequate working or living conditions or wages, WHD is encouraged to refer information about potential heat-related hazards to OSHA.

Employers should be cognizant, particularly on hot days that the NEP mandates several steps OSHA must take in inspecting heat-related hazards, including but not limited to:

- Review injury and illness logs and incident reports for entries indicating heat-related illness;
- Review records of heat-related emergency room visits and/or ambulance transport, even if hospitalization did not occur;
- Interview workers for heat illness symptoms like headache, dizziness, fainting, dehydration, etc.;
- Determine if the employer maintains a heat illness and injury prevention program, and consider whether the program addresses hydration, breaks, shade, acclimatization, training, and other relevant policies; and
- Document relevant conditions, such as the heat index, any NWS heat alerts, type of heat source (e.g., direct sunlight, proximity to furnace), any injured employee's exertion level and duration of exposure to heat, and the like.

SQWINCHER HYDRATION SOLUTIONS HEAT HAZARD PREVENTION METHODS

Employers—especially those in the targeted industries—should consider several steps now to best protect themselves and their employees:

- Ensure their safety policies address heat-related hazards
- Implement acclimatization periods for new employees
- Develop a means to monitor the heat index and employee exposure to heat
- Train employees on heat-related illness and emergency response

Epidemiology

Every year, dozens of workers die and thousands more become ill while working in extreme heat or humid conditions. More than 40 percent of heat-related worker deaths occur in the construction industry, but workers in every field are susceptible. There are a range of heat illnesses and they can affect anyone, regardless of age or physical condition.

Prevention

Under OSHA law, employers are responsible for providing workplaces free of known safety hazards. This includes protecting workers from extreme heat. An employer with workers exposed to high temperatures should establish a complete heat illness prevention program.

Heat Illness Prevention Program Key Elements:

- A Person Designated to Oversee the Heat Illness Prevention Program
- Hazard Identification
- Hydration - Rest - Shade
- Acclimatization (New workers & workers returning from time off)
- Modified Work Schedules
- Training
- Monitoring for Signs and Symptoms
- Emergency Planning and Response

Occupational Factors that May Contribute to Heat Illness:

- High temperature and humidity
- Low fluid consumption
- Direct sun exposure (with no shade) or extreme heat
- Limited air movement (no breeze or wind)
- Physical exertion
- Use of bulky protective clothing and equipment

5 GALLON SQWINCHER COOLER

The rugged Sqwincer Cooler is designed to stand up to the toughest industrial environments. High-density polyurethane foam keeps contents colder longer, and the durable plastic outer jacket protects the cooler for years of reliable service.

- Large widemouth opening makes filling easy, and the lid tightens and opens with a quick quarter-turn
- Stain-resistant liner has easy-to-read graduations in both 1/2 gallon and metric liter increments, so mixing is easy
- Reinforced corners on the canopy to withstand harsh conditions

32-10 5 Gallon Cooler ~~\$67.25 EA.~~ **SALE \$50.00 EA.**

SQWINCHER 2.5 GALLON MIX

Powder Packs mix quickly and easily with water. When setting out water coolers for your crew, pouring in a convenient Powder Pack gives workers the electrolytes necessary to stay hydrated.

- 32-33 Asst. Flavors
- 32-34 Fruit Punch
- 32-35 Orange
- 32-36 Lemon Lime
- 32-37 Lemonade
- 32-38 Grape
- 32-39 Mixed Berry

PKG. YIELDS	PKG. PER CS.	CASE WAS	SALE CASE PRICE
2.5 GAL.	32	\$745.45	\$116.30

SQWINCHER SQWEEZE

Perfect for site locations that have no water available! Sqwincer Squeeze pops replace electrolytes, keeps you hydrated and cools you down. They taste great and quench your thirst, instead of just pumping empty sugar water into your body.

- 32-40 Sqwincer Squeeze Assorted Flavors
- 32-45 Sqwincer Squeeze ZERO Assorted Flavors

POPS PER BAG	BAGS PER CS.	CASE WAS	SALE CASE PRICE
